In Universal Aivism Peter Bisschop provides a critical edition and annotated translation of the sixth chapter of the Iavadharma Sra `Treatise on the Religion of Iiva', the so-called ntyadhy ya `Chapter on Appeasement'. The Sanskrit text is preceded by an extensive introduction on its composition, transmission and edition. The Iavadharma Sra has

arguably played a crucial role in the formation, development and institutionalisation of Shaivism. Through a detailed study of its extensive Sri Yantra, Peter Bisschop shows how the text advocates a system in which all worldly and cosmic power is ultimately dependent upon Shiva. The mantra itself is a mine of information on the evolving pantheon of early Brahmanical Hinduism. Thanks to generous support of the J. Gonda Fund Foundation, the e-book version of this volume is available in Open Access.

NASM Essentials of Corrective Exercise Training introduces the health and fitness

professional to NASM's proprietary Corrective Exercise Continuum, a system of training that uses corrective exercise strategies to help improve muscle imbalances and movement efficiency to decrease the risk of injury. This textbook includes several new chapters that were not included in NASM's previous corrective exercise materials, including the rationale for corrective exercise training, assessments of health risk, static postural assessments, range of motion assessments, and strength assessments (manual muscle testing) as well as corrective exercise strategies for the cervical spine, elbow, and wrist. There are more than 100 corrective exercise techniques in the categories of self-myofascial release, static stretching, neuromuscular stretching, isolated strength training, positional isometrics, and integrated dynamic movements included in the text. These, along with corrective exercise strategies for common movement impairments seen in each segment of the body, make this text the premier resource for learning and applying NASM's systematic approach to corrective exercise training.

This catalogue describes in a detailed and systematic way the rich and varied collection of Turkish manuscripts preserved in the John Rylands University Library in Manchester.

This book reviews the fundamental aspects of quinoxaline chemistry: synthesis, reactions, mechanisms, structure, properties, and uses. The first four chapters present a survey of the developments in quinoxaline chemistry since the publication of the monograph on "Condensed Pyrazines" by Cheeseman and Cookson in 1979. These chapters give comprehensive coverage of all the methods of the synthesis of quinoxalines and the important quinoxaline-containing ring systems such as thiazolo[3,4-a]-, pyrrolo[1,2-a]-, and imidazo[1,5-a]quinoxalines. Chapter five describes many new methods for the construction of quinoxaline macrocycles, which are important in applications such as optical devices and materials. The final chapter reviews all previously known rearrangements of heterocyclic systems that lead to benzimidazole derivatives. Mamedov critically analyses these transformations to reveal a novel acid-catalyzed rearrangement of quinoxalinones giving 2-heteroarylbenzimidazoles and 1-heteroarylbenzimidazolones in the presence of nucleophilic reactants (MAMEDOV Heterocycle Rearrangement). This book is of interest to researchers in the fields of heterocyclic and synthetic organic chemistry.
