The assembling process in the resulting copolymers is based on crosslinking through the reversible quadruple hydrogen bonding between side chain UPy modules. The adamantyl substituent was introduced in order to create a " hydrophobic pocket " that may protect the hydrogen bonds against the disruptive effect of water molecules.

Hydrogen bonded supramolecular polymers as self healing ...

Advances in fundamental understanding of polymer layering at surfaces are addressed. The effects of molecular weight of polymers, ionic strength, pH, and temperature on growth and post self assembly response of hydrogen bonded films are summarized and contrasted with trends known for electrostatically assembled films.

However, to increase further and, in parallel, to minimize the hydrogen affinity, we had to modify the hydrogen bonded structure by embedding motifs that exhibit low G H into the polymers backbone. Using density functional theory, we identify keto indoleamine hydrogen bonds as favorable to drive the reaction.

Hydrogen bonds in polymers Hydrogen bonding plays an important role in determining the three-dimensional structures and the properties adopted by many synthetic and natural proteins. Compared to the C-C, C-O, and C-N bonds that comprise most polymers, hydrogen bonds are far weaker, perhaps 5%.

Hydrogen Bonded Polymers Advances In Polymer Science

Combining supramolecular principles with block copolymer self-assembly offers unique possibilitiesto create materials with responsive and/or tunable properties. The present chapter focuses on supramolecularmaterials based on hydrogen bonding and (block co-) polymers. Several cases will be discussed where theself-assembled nanostructured morphology can be easily tuned using composition as the natural variable.A large body of the material reviewed concerns hydrogen-bonded side-chain (block co

Supramolecular Materials Based On Hydrogen-Bonded Polymers ...

This review introduces recent advances in the development of hydrogen bonding modules that can be useful for creating a variety of supramolecular polymers. Furthermore, we present selected examples of hydrogen bonded supramolecular polymers from the literature, by dividing them into three categories: supramolecular polymers assembled from small molecules, and main chain and side chain supramolecular polymers.
