"Includes: data files, TreePlan Decision Tree Add-in"--CD-ROM

"This twelfth edition of Statistics for Business and Economics is an introductory text emphasizing inference, with extensive coverage of data collection and analysis as needed to evaluate the reported results of statistical studies and make good decisions. As in earlier editions, the text stresses the development of statistical thinking, the assessment of credibility, and the value of the inferences made from data, both by those who consume and those who produce them. It assumes a mathematical background of basic algebra."--Xi (Preface).

The sixth edition of this classic text continues its popular interdisciplinary approach to the topic of leadership by examining fundamental elements of military leadership: the 'process' of leadership, the dynamic personal interactions between leader and followers, and the individual and organizational values that foster effective military leadership. Military Leadership provides a thoroughly reconsidered and greatly expanded mix of classic and contemporary articles as well as original essays, with authors representing all of the services. Incisive introductory essays to each section highlight themes and connections. Eric B. Rosenbach joins the editorial team for this edition, helping infuse the text with fresh perspectives. The essays of the sixth edition confront the kudos and criticisms that surround military leadership today, offer international viewpoints, and relate military leadership to contemporary leadership theory and approaches.

This compact and accessible text provides a comprehensive, issue-oriented introduction to population geography. First grounding students in the fundamentals, Bruce Newbold then explains the tools and techniques commonly used to describe and understand population concepts using real-world issues and events. Drawing on both U.S. and international cases, he explores such pressing concerns as HIV/AIDS, international migration, refugee movements, fertility, mortality, resource scarcity, and conflict. Every chapter includes both methods and focus sections to provide a more in-depth discussion of the ideas and concepts developed in the book. In addition, a wide array of maps, tables, and figures illustrate and enhance the cases. Newbold highlights the geographical perspective with its ability to provide powerful insights and bridge disparate issues by emphasizing the roles of space and place, location, regional differences, and diffusion. Arguing that an understanding of population is essential to prepare for the future, this cogent text will provide upper-division undergraduates with a thorough grasp of the field.

This balanced text offers a concise and readable introduction to world population growth and its implications for the future. With a population currently exceeding six billion and expected to reach ten billion by mid-century, the globe faces a demographic situation that is now more critical than ever before. While the developed world grapples with the problems of an aging and declining population, the developing world will contend with the opposite dilemma of explosive growth. And so the strongest factors shaping the global environment in the decades to come will include population fertility, the social and economic impact of the HIV/AIDS epidemic, legal and illegal immigration, and refugees. The implications are enormous as population growth exacerbates food and resource scarcities, places pressure on institutions, and promotes the potential for conflict. Drawing on a geographical perspective and using examples from around the world, this fully updated edition will be an invaluable resource for all readers concerned with the intertwined issues of population, environment, and health.

Crime, Law and Justice in New Zealand examines the recent crime trends and the social, political, and legal changes in New Zealand from the end of the twentieth century to the present. Serving as the only New Zealand-specific criminal justice text, this book takes a direct look at what is unique about the country's criminal justice system and recent crime trends. Crime rates peaked in the early 1990s and have fallen since. Newbold considers why this happened through factors such as economy, ethnic composition, changing cultural trends, and legislative developments in policing and criminal justice. He unpacks various types of crime separately: violent crime, property crime, drug crime, gang crime, organised crime, etc. and examines each in terms of the various complex factors affecting it, using illustrative examples from recent high-profile cases. The cover photo for Crime, Law and Justice in New Zealand was taken by Jono Rotman.
