Grit can fire up families to defy spiritual mediocrity. A rabid bat attack, a cancer diagnosis turned gospel megaphone, Grandma Camp, and a young boy fighting to save his vision are a few of the true-life examples that mark the path to building spiritual grit in families. The authors use scripture narratives such as rebuilding the Jerusalem walls and characters like Rahab and Elijah who need grit in a pinch. Scripture is blended with practical tips to keep the audience reading and help readers move easily from theory to practice in an appealing and often humorous environment. This book has twelve chapters and 188 pages. There are assignments and discussion questions for each chapter. The contributions of the author, a mother (Colleen), and her three daughters (Haley, Rosalind, and Claire) offer the reader a multigenerational view of building spiritual strength in families. Also, because all four contributors are now adults, this work looks at parenting from the back side of the process. The counsel offered is time-tested. "Sure to give frightened parents consolation and direction as they undertake one of life's most important tasks. [...] Readers are able to see each challenge or strategy from both the parent's and child's perspectives." -David (gospel preacher) and Heidi Banning "Colleen O'Steen uses her excellent writing skills in an effort to turn people back to God and the family." -Dee Bowman, gospel preacher "Tumbling Stones is replete with practical strategies: -Managing kids' excesses with games and entertainment -The daily gentle nudge for getting things done -A solution to whether to give kids an allowance -Designed to complement Bible class or personal study Colleen O'Steen is author of From Will to Power. She has taught Bible classes for more than thirty-five years and is a speaker at Christian conferences

A service and repair manual with generic model coverage, suitable for 50 to 250cc scooters with carburettor engines. Includes a data section on the following models Aprilia SR50 (94-99), Rally 50, Sonic FT and GP, Leonardo 125.

This monograph begins with a puzzle: a Babylonian text from late 5th century BCE Uruk associating various diseases with bodily organs, which has evaded interpretation. The correct answer may reside in Babylonian astrology, since the development of the zodiac in the late 5th century BCE offered innovative approaches to the healing arts. The zodiac—a means of predicting the movements of heavenly bodies—transformed older divination (such as hemerologies listing lucky and unlucky days) and introduced more favorable magical techniques and medical prescriptions, which are comparable to those found in Ptolemy's Tetrabiblos and non-Hippocratic Greek medicine. Babylonian melothesia (i.e., the science of charting how zodiacal signs affect the human body) offers the most likely solution explaining the Uruk tablet.

Motorcycle maintenance made easy: -- Aimed at the DIY mechanic and students embarking on courses in motorcycle engineering -- Service tasks are described in detail and illustrated with over 900 color photographs -- Information on how to build up a toolkit and keep service records -- Tools, testing and measuring equipment, oils and workshop equipment -- Using a service schedule and keeping records -- Engine: Oil and filter, valve clearances, compression test, air and fuel filters, carburetor balance, coolant, spark plugs, clutch and exhaust system -- Chassis: Chain, sprockets, tires, disc brakes, drum brakes, wheel bearings, front forks, steering head bearings, rear shock, handlebars, swinging arm bearings, cables, footrests, stands and bodywork. -- Electrics: battery, fuses, bulbs, horn, switches and wiring -- Accessories: twin horns, fork gaiters, top box and drive chain oiler

If you can build websites with CSS and JavaScript, this book takes you to the next level—creating dynamic, database-driven websites with PHP and MySQL. Learn how to build a database, manage your content, and interact with users. With step-by-step tutorials, this completely revised edition gets you started with expanded coverage of the basics and takes you deeper into the world of server-side programming. The important stuff you need to know: Get up to speed quickly. Learn how to install PHP and MySQL, and get them running on both your computer and a remote server. Gain new techniques. Take advantage of the all-new chapter on integrating PHP with HTML web pages. Manage your content. Use the file system to access user data, including images and other binary files. Make it dynamic. Create pages that change with each new viewing. Build a good database. Use MySQL to store user information and other data. Keep your site working. Master the tools for fixing things that go wrong. Control operations. Create an administrative interface to oversee your site.

Over the past ten years there has been a massive growth in call centres worldwide. These centres are said to represent the most dynamic growth area in white-collar employment internationally since the mid 1990s. Yet the footloose and global nature of the industry means that jobs will always be susceptible to outsourced operations, ICT developments, public sector subsidization of business restructuring and re-location, and cheaper operations elsewhere. This book conducts a thorough analysis of this modern phenomenon.

First published in 2005. Routledge is an imprint of Taylor & Francis, an informa company.

Thank you for reading our PRINCE2 Foundation Training Manual. The main objective of this book is to provide an easy-to-read and easy-to-understand PRINCE2(R) Foundation training manual. The official PRINCE2 manual, "Managing Successful Projects with PRINCE2," is an excellent reference manual, but it is not a training manual and should not be used as one, as it is very difficult to comprehend and understand if you are new to project management. The official PRINCE2 manual also covers the complete Practitioner Syllabus, and it's impossible to know which parts are just focused on the PRINCE2 Foundation syllabus, so you have to read everything, which is not good if you are just studying for the foundation exam. Henceforth, this book is meant to be (and is) an easy introduction to PRINCE2 based on the Foundation syllabus, and it's quickly becoming the most read book for people wishing to learn about PRINCE2 and prepare for the foundation exam.

This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research
